DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-17 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6 and 15-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al. (US Patent No. 5,921244) in view of Zeng et al. (US Patent No. 6,128,525). Chen discloses a method and system for photodynamic therapy. A magnetic field is induced in the region of interest synchronously with the application of the light being used for the therapy. The system is placed within a housing, as illustrated by the accompanying Figures. However, Chen does not incorporate a light detection means. Zeng teaches a method and apparatus for controlling the dosimetry of a photodynamic therapy. The method comprises collecting photoproducts created by the agent being used in the therapy. A baseline spectrum is created and ratio analysis then ensues (column 4, lines 1-45). Zeng also discusses that the oxygen supply is an important factor affecting photodynamic therapy (column 1, lines 31-35). It would have been obvious to one having ordinary skill in the art at the time the invention was made

Art Unit: 3737

to provide a means to monitor the progress and efficacy of therapy, as taught by Zeng, in the system of Chen in order to provide saf treatment of a site using photodynamic therapy and ensuring that overexposure to treatment light leading to damage of normal tissue or underexposure leading to ineffective treatment of the lesion does not occur (Abstract of Zeng).

Allowable Subject Matter

Claims 7-14 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Kish whose telephone number is 571-272-5554. The examiner can normally be reached on 8:30 - 5:00 ~ Mon. - Fri..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on 571-272-4956. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
